TransMotion Medical Introduces First – Power Drive Stretcher-Chair

SHARON CENTER, OH – TransMotion Medical, Inc. introduces its first Power Driven Stretcher-Chair. The revolutionary TMM6 is a stretcher-chair with both POWER DRIVE and POWER POSITIONING. Now staff can DRIVE patients throughout a healthcare facility with just one finger and POSITION them from supine to upright, as well as adjust height – all at the touch of a button. By reducing total transfers, the TMM6 can reduce operating costs, decrease staff injury and patient fall risk, reduce time spent on patient transport, and eliminate manual positioning and all push/pull force associated with patient handling.

The TMM6 Power Drive Chair combines the benefits of a chair, motorized transport device, procedure table, and stretcher -- all in one! It is a total safe patient handling solution and is recommended for use in Emergency, Transport, Endoscopy, and ICU. It features a radiolucent back section for unobstructed access of C-Arm, X-Ray and Fluoroscopy procedures, so it is also an excellent choice for Radiology. Thanks to its unique patent-pending drive system, the TMM6 also has unmatched maneuverability, with zero-turn capability to maneuver in tight spaces. It effortlessly handles ramps, carpet, and bumpy thresholds. **Staff can drive up to a 500 lb. patient, three mph, for 10 to 15 miles at the touch of a button!**

“We’re pleased to bring the advanced technology of the TMM6 to a market that is demanding safe patient handling solutions. We believe it will help transform the way healthcare views patient movement through the care cycle by eliminating all push-pull, lifting and manual positioning,” said Ryan Yerkey, C.O.O. of TransMotion Medical. The concept is One Patient, One Surface™ -- from admission to discharge. By reducing the number of transfers, it streamlines the patient throughput process for increased productivity and reduces patient fall and staff injury risk for a return on investment that is measured in months not years.”

For more information, call 1-866-860-8447 or visit www.TransMotionMedical.com.

TransMotion Medical, Inc. manufactures the most advanced selection of motorized medical stretcher-chairs on the market. Available in more than 130 versatile configurations, this mobile line converts from chair to procedure/stretcher at the push of a button. Designed to reduce, if not eliminate, the need for patient transfer. One patient, one surface™ – from admission to discharge. TransMotion Medical stretcher-chairs can be found in the top-rated hospitals and surgical centers across the United States as well as international markets. Our mission is to passionately create equipment required by healthcare professionals to reduce or eliminate patient transfers, thereby reducing operating costs, reducing patient fall risk, preventing staff injury and improving throughput.
